

# Stickman Strategy Checklist - Complete More Levels

Stickman | Complete More Levels | Asset ID GAME-15-05-08

**Player goal: break a long level into learnable sections. Success means you can reach one new checkpoint or complete one blocked section.**

## How to use this download

This is a genre-level learning resource, so it works across original browser games that share stickman mechanics. Read one section, test it in a short session, and write down what happened. Keep the part that helped; change the part that did not.

| Planning field | Write or choose                                    |
|----------------|----------------------------------------------------|
| Category       | Stickman                                           |
| Resource       | Strategy Checklist                                 |
| Player goal    | Complete More Levels                               |
| Session length | Choose 10, 20 or 30 minutes                        |
| Baseline       | Record one normal attempt before changing anything |
| Review rule    | Change one variable, then compare like with like   |

## Category fundamentals

The useful starting point in Stickman games is to use clean timing, readable spacing and simple combinations. These six fundamentals give your practice a clear order.

| # | Fundamental       | Player cue                  |
|---|-------------------|-----------------------------|
| 1 | Movement spacing  | Notice it before acting     |
| 2 | Attack range      | Practise it slowly          |
| 3 | Combo timing      | Name the cue                |
| 4 | Defence and dodge | Use it in one safe attempt  |
| 5 | Recovery          | Record one result           |
| 6 | Environment use   | Retest under light pressure |

## Before the first attempt

- Write the exact result you want from this session.
- Check the game's own rules and controls; this guide does not replace them.
- Pick one metric from page 3. More numbers are not automatically better.
- Track the first failing section, not just the final result.
- Stop the session while you can still describe what changed.

## Strategy Checklist

A usable strategy survives contact with the next obstacle. For Stickman, use this checklist to decide early, act simply and recover without turning one mistake into three.

| Moment   | Questions to answer                                                                  |
|----------|--------------------------------------------------------------------------------------|
| Before   | What is the objective? What information is visible? What resource must be protected? |
| Opening  | Which safe action tests movement spacing without committing the whole run?           |
| Pressure | What changed? Which option preserves a recovery route?                               |
| Behind   | What small objective can be recovered without forcing a low-value risk?              |
| Ahead    | What risk can be removed? What resource should be held?                              |
| After    | Which decision mattered most, and what evidence supports that view?                  |

### Decision ladder

- See: describe the current state without judging it.
- Choose: name a safe option and a higher-risk option.
- Act: use the smallest input that tests the choice.
- Read: watch the result before the next input.
- Recover: return to a stable position or plan.

## Stickman Practice Lab

Pick one drill. Run a normal attempt first, then three focused attempts, then one normal attempt again. The final attempt shows whether the practice transferred back into play.

| # | Drill                          | Skill tested      | Record            | Result        |
|---|--------------------------------|-------------------|-------------------|---------------|
| 1 | Hold a safe distance           | Movement spacing  | Clean hits        | Result: _____ |
| 2 | Land one move at maximum range | Attack range      | Blocked attacks   | Result: _____ |
| 3 | Repeat a short combo           | Combo timing      | Missed openings   | Result: _____ |
| 4 | Defend three attacks in a row  | Defence and dodge | Successful dodges | Result: _____ |
| 5 | Pause after a missed move      | Recovery          | Combo completion  | Result: _____ |
| 6 | Win using the environment once | Environment use   | Clean hits        | Result: _____ |

## Common traps and a cleaner response

| Trap                         | Cleaner response                                        |
|------------------------------|---------------------------------------------------------|
| Button mashing               | Pause at the trigger and state the intended action.     |
| Starting combos out of range | Return to one dependable input before rebuilding speed. |
| Attacking during recovery    | Use a fixed marker, route or rule for the next test.    |
| Backing into hazards         | Compare the attempt with the same starting state.       |
| Repeating the same approach  | End the run, write the cause and reset deliberately.    |

## Small signal dashboard

Choose one main signal for the week. A score can rise while decision quality gets worse, so keep one behaviour measure beside the result.

| Signal            | Start           | Latest         | Decision             |
|-------------------|-----------------|----------------|----------------------|
| Clean hits        | Baseline: _____ | Current: _____ | Keep / change: _____ |
| Blocked attacks   | Baseline: _____ | Current: _____ | Keep / change: _____ |
| Missed openings   | Baseline: _____ | Current: _____ | Keep / change: _____ |
| Successful dodges | Baseline: _____ | Current: _____ | Keep / change: _____ |
| Combo completion  | Baseline: _____ | Current: _____ | Keep / change: _____ |

## Session Sheet for Complete More Levels

Today's focus is to break a long level into learnable sections. Track the first failing section, not just the final result.

| Session field      | Entry                                        |
|--------------------|----------------------------------------------|
| Player or initials | _____                                        |
| Date and game      | _____                                        |
| Input method       | Keyboard / touch / gamepad / other           |
| Session target     | _____                                        |
| Main signal        | Clean hits                                   |
| Comfort check      | Visual / audio / motion / reach / break plan |

## Twenty-minute practice shape

| Time      | Action                                                             |
|-----------|--------------------------------------------------------------------|
| 0-2 min   | Warm up with familiar inputs. No score target.                     |
| 2-7 min   | Focused drill: Hold a safe distance.                               |
| 7-12 min  | Focused drill: Land one move at maximum range.                     |
| 12-17 min | Return to normal play and use the skill only when its cue appears. |
| 17-20 min | Record the result, one cause and the next test.                    |

## Attempt log

| Attempt | Outcome       | Observation        | Decision           |
|---------|---------------|--------------------|--------------------|
| 1       | Result: _____ | Cue noticed: _____ | Next change: _____ |
| 2       | Result: _____ | Cue noticed: _____ | Next change: _____ |
| 3       | Result: _____ | Cue noticed: _____ | Next change: _____ |
| 4       | Result: _____ | Cue noticed: _____ | Next change: _____ |
| 5       | Result: _____ | Cue noticed: _____ | Next change: _____ |

## Close the session

- What improved when I slowed down? \_\_\_\_\_
- Where did the first avoidable error begin? \_\_\_\_\_
- What setting or instruction should stay the same next time? \_\_\_\_\_
- Next session's single focus: \_\_\_\_\_

## Controls, Comfort and Accessibility Lab

A strong setup removes friction without playing the game for you. Record the current setup, change one option and replay the same short section before deciding what to keep.

| Area           | One option to test                         | Question after the replay                    |
|----------------|--------------------------------------------|----------------------------------------------|
| Visual clarity | Text size, contrast, effects or camera     | Can I read the next cue in time?             |
| Audio clarity  | Cue balance, captions or output device     | Can I identify the useful sound comfortably? |
| Input reach    | Binding, grip, gesture area or handedness  | Can I repeat the input without strain?       |
| Motion comfort | Camera speed, shake, blur or field of view | Can I track movement without discomfort?     |
| Session pace   | Pause points, reminders or break length    | Can I finish focused rather than fatigued?   |
| Interface load | Notifications, clutter or pointer size     | Is the objective easier to find?             |

## One-change comparison

| Test field             | Record                               |
|------------------------|--------------------------------------|
| Short test section     | _____                                |
| Original setting       | _____                                |
| Single change          | _____                                |
| Old result             | Clean hits: _____                    |
| New result             | Clean hits: _____                    |
| Comfort before / after | ___ / 5 ___ / 5                      |
| Decision               | Keep / revise / restore / test again |

## Stop-and-adjust signals

- Repeated wrong inputs after slowing down
- Text, targets or hazards remain hard to distinguish
- Headache, eye strain, dizziness, numbness or pain
- Audio is uncomfortable or masks the cue you need
- Frustration makes the next attempt less deliberate

## Stickman Scenario Cards

Use these cards away from a live attempt first. Say what you notice, choose one action and name the evidence that would make you change course. There is rarely one universal answer; the value is in making the decision visible.

| # | Situation                                                          | First question          | Small response                      |
|---|--------------------------------------------------------------------|-------------------------|-------------------------------------|
| 1 | The opening plan stops working earlier than expected.              | Check movement spacing  | Use: hold a safe distance           |
| 2 | A tempting reward appears while the safe route is still available. | Check attack range      | Use: land one move at maximum range |
| 3 | One mistake has just broken the rhythm of the run.                 | Check combo timing      | Use: repeat a short combo           |
| 4 | The useful cue is visible, but the input keeps arriving late.      | Check defence and dodge | Use: defend three attacks in a row  |
| 5 | The result improves once, then drops on the next two attempts.     | Check recovery          | Use: pause after a missed move      |
| 6 | You have enough time for only one more focused attempt.            | Check environment use   | Use: win using the environment once |

## Work one card fully

| Decision field       | Notes                                                     |
|----------------------|-----------------------------------------------------------|
| Chosen card          | _____                                                     |
| What is known        | _____                                                     |
| What is assumed      | _____                                                     |
| Safe option          | _____                                                     |
| Higher-risk option   | _____                                                     |
| My choice and reason | _____                                                     |
| Evidence to watch    | Blocked attacks: _____                                    |
| Goal connection      | This helps me break a long level into learnable sections. |

## Debrief

- What did I notice early enough? \_\_\_\_\_
- Which assumption was wrong? \_\_\_\_\_
- Did the result come from the decision or the input? \_\_\_\_\_
- What would make the safer option too passive? \_\_\_\_\_

## Seven-Session Evidence Tracker

Use the same main signal for all seven sessions. The purpose is to see whether work on complete more levels transfers into normal play, not to manufacture a perfect upward line.

| Session | Focus             | Signal            | Result | One useful note |
|---------|-------------------|-------------------|--------|-----------------|
| 1       | Movement spacing  | Clean hits        | _____  | _____           |
| 2       | Attack range      | Blocked attacks   | _____  | _____           |
| 3       | Combo timing      | Missed openings   | _____  | _____           |
| 4       | Defence and dodge | Successful dodges | _____  | _____           |
| 5       | Recovery          | Combo completion  | _____  | _____           |
| 6       | Environment use   | Clean hits        | _____  | _____           |
| 7       | Movement spacing  | Blocked attacks   | _____  | _____           |

## Compare the pattern

| Review                 | Value | Context                      |
|------------------------|-------|------------------------------|
| Baseline result        | _____ | Conditions: _____            |
| Typical result         | _____ | Based on sessions: _____     |
| Best repeatable result | _____ | Repeated how often? _____    |
| Largest drop           | _____ | Likely trigger: _____        |
| Comfort pattern        | _____ | Break or setup change: _____ |

## Evidence-based decision

- Keep: the routine that produced a repeatable gain.
- Change: the smallest cause linked to the repeated error.
- Pause: a metric that adds logging but no useful decision.
- Next target: one behaviour and one result for the next seven sessions.

## Personal Playbook and Next-Step Plan

Finish by turning your notes into a short playbook you can actually remember. Write actions in your own words and keep only the cues that changed a decision or result.

| Moment        | My rule                                                   |
|---------------|-----------------------------------------------------------|
| Before play   | I will check the objective, comfort and movement spacing. |
| Opening cue   | When I notice _____, I will test attack range.            |
| Pressure rule | When the plan breaks, I will _____.                       |
| Recovery rule | After an error, I will use pause after a missed move.     |
| Risk rule     | I will take the higher-risk option only when _____.       |
| Stop rule     | I will pause or finish when _____.                        |
| Review rule   | I will record clean hits and one cause.                   |

## Two-week continuation plan

| Session   | Practice                       | Purpose                       |
|-----------|--------------------------------|-------------------------------|
| Session 1 | Hold a safe distance           | Set a clean baseline          |
| Session 2 | Land one move at maximum range | Repeat one visible cue        |
| Session 3 | Repeat a short combo           | Apply under light pressure    |
| Session 4 | Defend three attacks in a row  | Retest the weak section       |
| Session 5 | Pause after a missed move      | Check transfer to normal play |
| Session 6 | Win using the environment once | Review: Complete More Levels  |

### Completion review

- I can now reach one new checkpoint or complete one blocked section: yes / partly / not yet
- The clearest evidence is: \_\_\_\_\_
- The most useful page in this workbook was: \_\_\_\_\_
- My next small target is: \_\_\_\_\_

Original independent resource created for ArcadeOwl. It is a generic learning and record-keeping aid, not an official game manual and not affiliated with a game publisher or platform. Check each game's own controls, rules, age guidance and terms. Stop if play causes pain, dizziness or distress, and seek suitable advice where needed. Do not add copied screenshots, maps, artwork, story text, music, manual pages or third-party walkthrough text when adapting this file.
